## Trends & Projects

**S**anoVita GmbH opens further markets, such as Canada, USA and Thailand.

In Canada and Thailand, the first registrations are scheduled for the fourth quarter of 2023. In the USA, the company expects the first approvals in the fourth quarter of the following year 2024.

SanoVita GmbH was able to achieve a further positive development in Egypt, where our local partner is targeting new markets in the Middle East.

In the fourth quarter of 2023, a new production plant will be put into operation on SanoVita GmbH's own premises.

The own production of liquid products enables independence and quality assurance, both of which have a high priority in SanoVita GmbH. We owe this to our partners and customers!

Below you will find the results of our partners, which were achieved in different countries, by using our SanoVita products / product range.

## Brazil Soybeans

Not treated

Treated with herbagreen®

Crop: Soybeans

State: Goias

District: Rio Verde

Better Quality:

Higher Yield:

### Statement:

The applied herbagreen® products are:

herbagreen® Z 20: 4 applications with 750 g per application / ha.

herbagreen® Fluisan: 1 application with 50 ml per application / ha.

herbagreen® Humin: 1 application with 200 ml per application / ha.

The application of the product package herbagreen® Premium caused a **significant strengthening of the young plants against plant diseases**, compared to the control plot. Younger leaves were **significantly stronger and hardly infested**.
